

MULTIMEDIA DEVELOPMENT

Multimedia technology is everywhere. From tablets and smart phones to online applications and public kiosks, multimedia is engaging, intuitive and a part of our daily lives.

Interactive multimedia engages your audience and communicates your message through an integration of video, sound and animation. Museums, science centers, national parks and corporations have benefited from custom multimedia applications developed by Impact Communications.

Multimedia programs, interactive kiosks and interpretive tours provide entertaining and memorable experiences for your visitors and program users. E-learning programs deliver highly interactive, dynamic and effective training for your employees and sales representatives.

Contact Impact to discuss the ways that interactive multimedia can engage, educate, test, track, showcase and promote for your organization. Our creative and technical specialists will support you in the development of innovative and unique interactive experiences.
